TRIMBLE

"Transforming the way the world works"

Product Application Engineer for the Hannover area

[Trimble Land Administration Penmap](#) team is seeking highly skilled,
enthusiastic application engineer. Successful candidates will join our team
in Wunstorf (Hannover) working on a mature, workflow-driven application,
used by major survey companies and government agencies around the world.

You would join an established and inviting team that is on an exciting journey
of developing Android-based and Cloud-based products for a global GIS and survey market.

We offer a dynamic and innovative work environment with fast decisions and an open and informal office
environment. This is a great platform for your career in a global acting company. You will be able to
influence on product features and the way of working.

We are looking for smart people who can get things done, to work in a team, where you will be required
to contribute to extending & maintaining our software.
Preferably an engineer with a surveying degree or experienced surveyor

Skills and experience required:

- A good understanding of survey processes including data preparation, site measurement, quality
  control and checking operations
- Preferably an engineer with a surveying degree or experienced surveyor
- Experience with GNSS Survey instruments and Total stations

- Customer focused and results-oriented
- Ability to assess market needs, evaluate options and document requirements
- Be a self-starter, goal-orientated and a team player
- Excellent German / English language proficiency

Be part of the transformation and send your CV to
